PROFILE

Dedicated software engineering student with hands-on experience building machine learning pipelines, data analysis tools, and full-stack web applications with interest in the intersection of technology, data, and real-world impact. Available starting August 30, 2026.

EDUCATION

Bachelor of Science, Software Engineering

Expected graduation: April 2027

Schulich School of Engineering, University of Calgary

CORE SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, C, C++

Frontend: React, Next.js, HTML, CSS, ShadCN

Backend & Databases: Flask, PostgreSQL, MySQL, Supabase, Javalin

Concepts and Methodologies: Machine Learning, Object-oriented Programming, Data Structures and Algorithms, Full-Stack Web Development, Software Testing

Tools & Environments: Git, GitHub, VS Code, Linux/Unix shell

Familiar With: Power BI, Docker, Jenkins, Kubernetes, MATLAB, Jira, JUnit, Microsoft Office Suite

WORK EXPERIENCE

Barista

Oct 2023 – Oct 2025

Starbucks, Calgary, AB

- Delivered consistent customer service within a team in a high-volume environment, developing strong communication, prioritization, and composure under pressure
- Onboarded and coached new team members on drink preparation standards and customer service protocols, shortening ramp-up time during peak hiring periods
- Adapted quickly to shifting priorities during rush periods, managing concurrent orders and resolving customer concerns on the spot to maintain service quality

PROJECTS

NBA Player Performance Predictor | Python, scikit-learn | github.com/Siju-Xavier/ENSF444-Project-Group22

- Built an ML classification pipeline to predict player performance using feature engineering and model evaluation on 10,000+ game records
- Compared multiple classifiers (Logistic Regression, Random Forest, SVM, KNN) and assessed accuracy through stratified splits, StandardScaler normalization, and precision/recall evaluation
- Developed and benchmarked three ML models against the same problem to identify the best-performing approach for prediction accuracy

Flight Reservation System | Java, Javalin, MySQL | github.com/Siju-Xavier/FlightReservationSystem

- Built a flight reservation system in Java supporting three user roles, designed collaboratively with a team of four using UML diagrams to plan class structure

- Developed controller logic, business layer classes, and JDBC data access; later extended the project by building a React + Vite frontend to replace the console interface
- Designed and queried a relational MySQL database for reservations, flight lookups, and seat availability.

Advanced Weather App | React 19, TypeScript, Supabase, Mapbox GL JS, Tailwind | advanced-weather-app-peach.vercel.app

- Built a full-stack weather SPA using React 19, TypeScript, Supabase, and Mapbox GL JS, enabling interactive location search and dynamic data visualization
- Extended the project beyond starter scope by adding Supabase auth, row-level security, Framer Motion animations, and third-party API integrations

Fire Rescue | C#, Unity, UML/SysML | deebo8070.itch.io/firerescue

- Developed a C# and Unity game aligned with SDG goals, featuring sprite-based gameplay with a fire rescue theme
- Served as co-project manager, co-designing UML/SysML architecture, applying Observer and Strategy patterns, and leading UI development including sprite animation and game panels
- Delivered the project on schedule through regular team syncs and Git-based version control, strengthening collaboration and systems design skills

AWARDS AND CERTIFICATIONS

- Engineering Leadership — Tier 1, 2 & 3
- Engineering Entrepreneurship Essentials
- Innovation and Core Concepts of Engineering Entrepreneurship
- Advanced Engineering Entrepreneurship
- Engineering Practicum Program

VOLUNTEER EXPERIENCE

Co-President Apr 2024 – Apr 2025

Engineers Without Borders, University of Calgary

- Led the student chapter executive team, driving strategic planning, member engagement, and chapter goal execution across a full academic year
- Facilitated cross-functional collaboration between executive members to coordinate club activities and strengthen the chapter's presence on campus

VP Communications Sep 2023 – Apr 2024

Engineers Without Borders, University of Calgary

- Managed all chapter communications including meeting announcements, event promotions, and member outreach to drive consistent engagement
- Produced digital content and promotional materials that increased student awareness and participation in club initiatives

VP Events Sep 2024 – Aug 2025

Right to Play, University of Calgary

- Planned and executed student-led events and fundraisers, managing end-to-end logistics from volunteer coordination to on-day operations
- Raised awareness of the organization's mission on campus through targeted outreach and community-focused programming
